

54ACQ/74ACQ377 • 54ACTQ/74ACTQ377

Quiet Series Octal D Flip-Flop with Clock Enable

General Description

The 'ACQ/'ACTQ377 has 8 edge-triggered D-type flip-flops with individual D inputs and Q outputs. The common buffered Clock (CP) input loads all flip-flops simultaneously, when the Clock Enable (CE) is low. The register is fully edge-triggered. The state of each D input, one set-up time before the LOW-to-HIGH clock transition, is transferred to the corresponding flip-flop's Q output. The \overline{CE} input must be stable only one set-up time prior to the LOW-to-HIGH clock transition for predictable operation.

The 'ACQ/'ACTQ utilizes NSC Quiet Series technology to guarantee quiet output switching and improved dynamic threshold performance. FACT Quiet Series™ features GTO™ output control and undershoot corrector in addition to a split ground bus for superior performance.

Features

- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Guaranteed pin-to-pin skew AC performance
- Ideal for addressable register applications
- Clock enable for address and data synchronization applications
- Eight edge-triggered D flip-flops
- Buffered common clock
- Outputs source/sink 24 mA
- Faster prop delays than the standard 'AC/'ACT377
- 4 kV minimum ESD immunity

Pin Names	Description
D ₀ -D ₇	Data Inputs
\overline{CE}	Clock Enable (Active LOW)
Q ₀ -Q ₇	Data Outputs
CP	Clock Pulse Input
