

Speech network

BA6566/BA6566F/BA6566FP

The BA6566, BA6566F, and BA6566FP are speech network ICs which possess the basic functions required for handset communications. In addition to amplifying signals from a transmitter and sending them to a telephone line, they also amplify only reception signals from a telephone line and drive the receiver. They also compensate for fluctuation in the volume at which signals are transmitted and received, caused by the length of the telephone line (AGC).

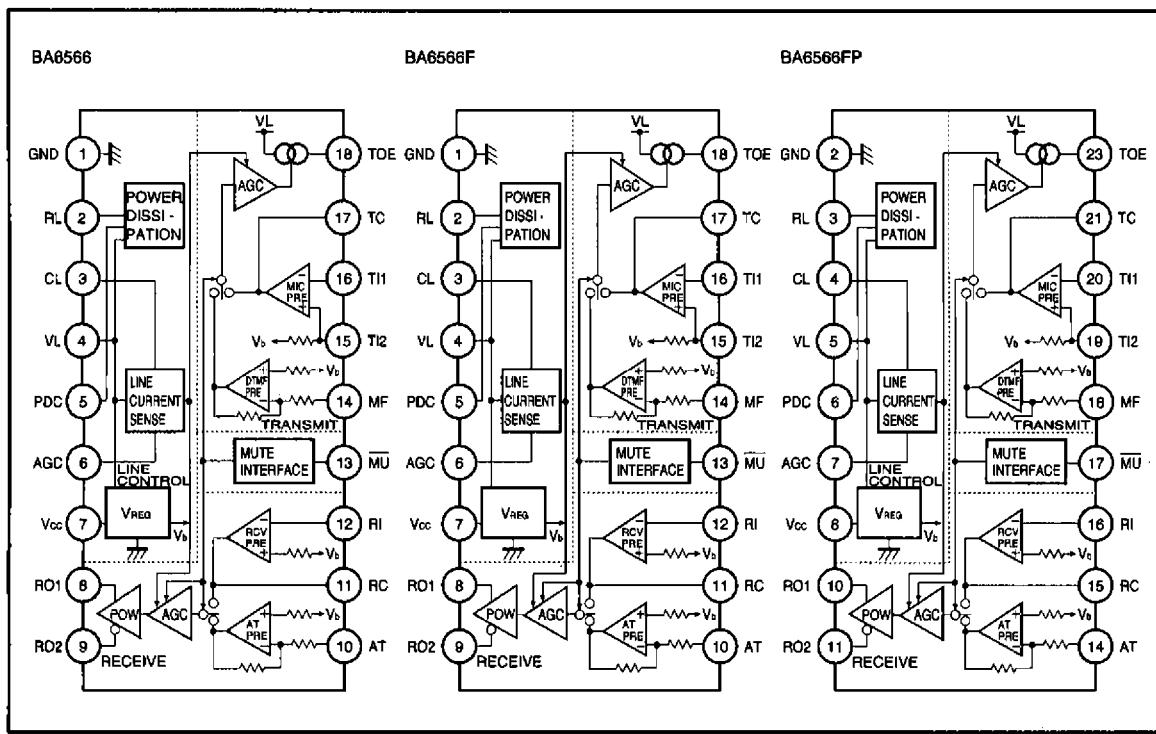

● Applications

Telephones and telephone equipment

● Features

- 1) Can accommodate both dynamic and piezoelectric receivers, simply by changing the circuit constant for a wide dynamic reception range.
- 2) Automatic gain control (AGC) is used, based on the transmission and reception telephone line current, for easier compliance with communications standards.
- 3) Erroneous operation caused by high-frequency electrical wave interference is minimized.
- 4) An HSOP package is used, eliminating the need for an attached transistor to dissipate heat. This means that a common circuit can be shared when a DIP package is used (BA6566FP).

● Block diagram

● Absolute maximum ratings (Ta=25°C)

Parameter	Symbol	Limits	Unit
Applied voltage	V _L	16.5	V
Power dissipation	Pd	1100 * ¹	mW
		600 * ²	
		1200 * ³	
Operating temperature	T _{opr}	-35~60	°C
Storage temperature	T _{stg}	-55~125	°C
Current consumption	I _L	125 * ⁴	mA

*1 Reduced by 11 mW for each increase in Ta of 1°C over 25°C.

*2 Reduced by 6 mW for each increase in Ta of 1°C over 25°C.

*3 Reduced by 12 mW for each increase in Ta of 1°C over 25°C.

When mounted on 90 mm X 50 mm X 1.6 mm glass epoxy board, fins should be soldered to foil pattern.

*4 With the BA6566, Reduced by 1 mA for each increase in Ta of 1°C over 50°C.

With the BA6566F, Reduced by 1.4 mA for each increase in Ta of 1°C over 50°C.

With the BA6566FP, Reduced by 1 mA for each increase in Ta of 1°C over 50°C.
