Expanding the Industry's Leading Networking Portfolio

The tremendous growth of wired and wireless data has increased demand for both control plane and mixed control/data plane processing.

The T4 family within the QorIQ Advanced Multiprocessing (AMP) Series supports the highly parallelized workload requirements of mixed control & data plane applications with multithreaded, multicore processors.

The P5 family addresses the needs of **compute intensive control plane applications** with devices that integrate the **highest performance single-threaded cores** in the QorIQ portfolio.

- Broad portfolio with on-time, on-specification release track record
- Software and tools ecosystem catering for Tier1 and broad market customers
- Common software tool sets including CodeWarrior Development Suite and VortiQa
- Open, rich third-party ecosystem for operating system, tools and application software

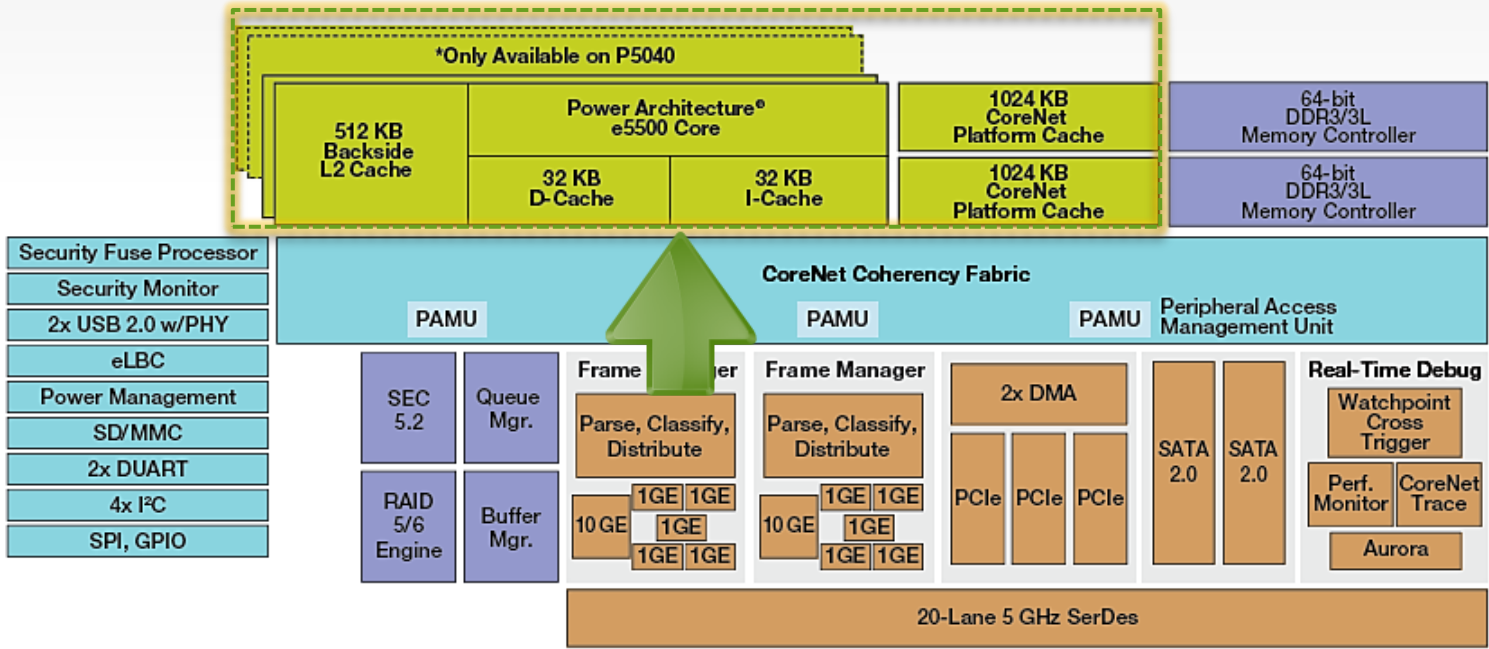

Expanding the QorIQ P5 Family

- **Announcing two new QorIQ P5 family devices with top-tier single-threaded performance for power-conscious control plane applications: QorIQ P5040 and P5021**
 - A scalable processor family with single-, dual- and quad-core options
 - Balanced architecture features up to 4 high-performance 64-bit e5500 Power Architecture® cores and low latency memory hierarchy for compute-intensive applications with tight thermal constraints
 - Support for core frequencies up to 2.4 GHz
 - Typical power consumption less than 22 Watts
 - 3-4x the performance of previous generation control plane processors
 - Intelligent integration of cores, accelerators and advanced I/O to achieve optimum system performance while reducing system development and thermal management costs

QorIQ P5040/5021 Block Diagram

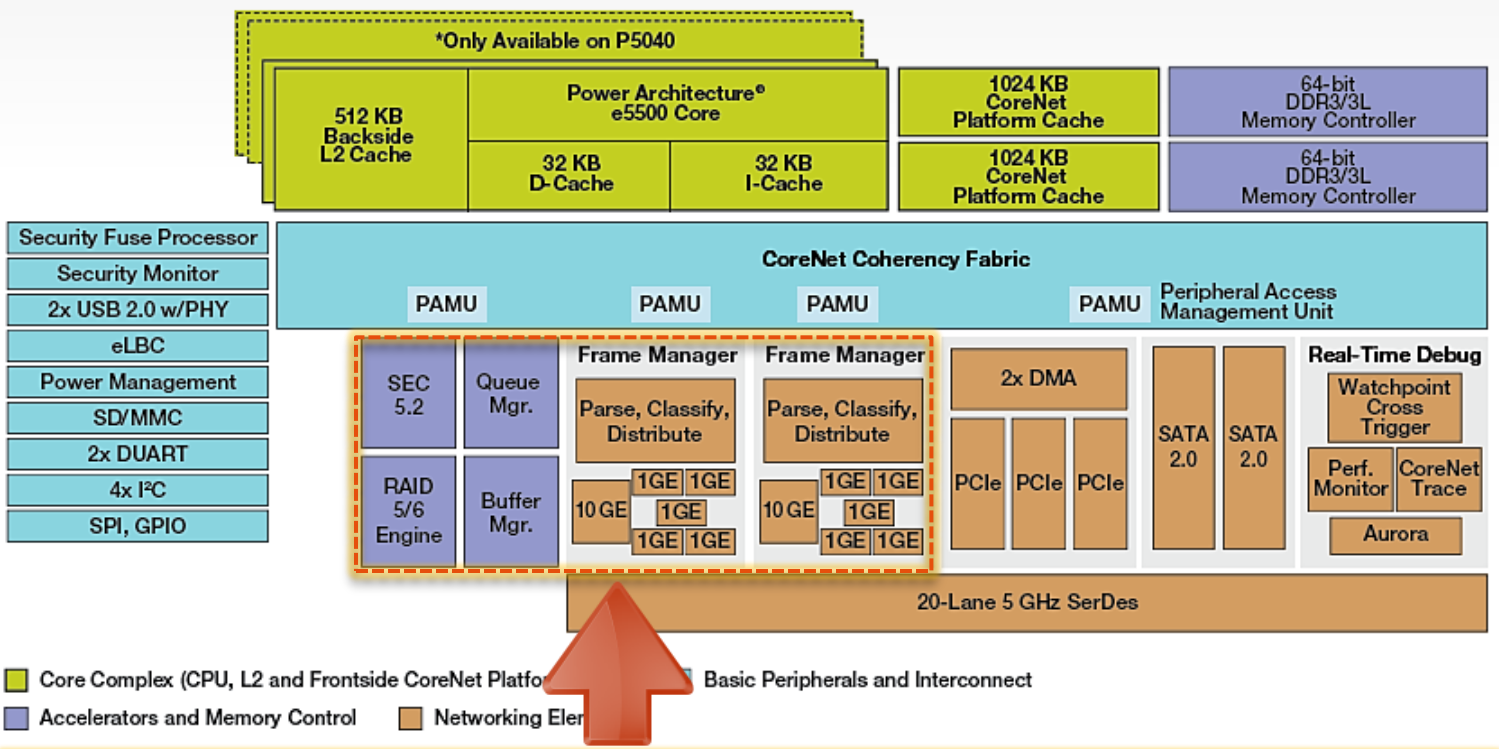

- Core Complex (CPU, L2 and Frontside CoreNet Platform Cache)
- Basic Peripherals and Interconnect
- Accelerators and Memory Control
- Networking Elements

High Performance Core/Caches	
Power Architecture e5500 core	Up to 2.4GHz Up to 64-bit addressable memory space
512KB/core L2 2MB CPC (L3)	Tightly coupled cache hierarchy for low latency

QorIQ P5040/5021 Block Diagram

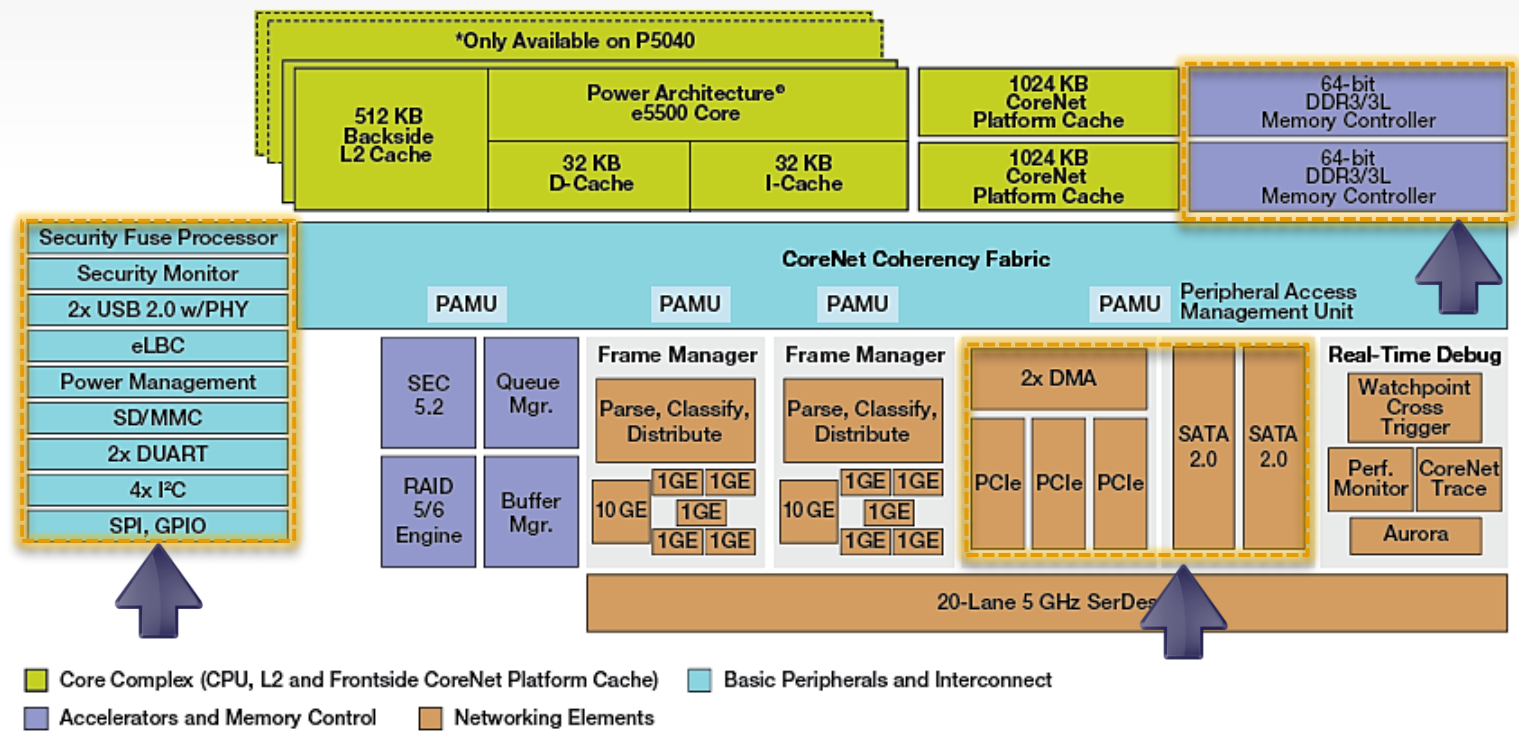

Hardware Accelerators	
FMAN Frame Manager	24 Gbps aggregate Parse, Classify, Distribute
BMAN Buffer Manager	64 buffer pools
QMAN Queue Manager	Up to 2 ²⁴ queues
SEC Security	IPSec, SSL Public Key 25K/s 1024b RSA
RAID5/6	RAID5/RAID6 parity generation

QorIQ P5040/5021 Block Diagram

High Performance I/O –	
Dual DDR3/3L	64-bit, 1600MT/s
Dual 10GbE	24Gbps Classify, Parse, Distribute
10x 1GbE	
PCIe Gen2.0	3x PCIe controllers (5Gbps)
USB	Dual with integrated PHY
IFC	Legacy ASIC connectivity & modern flash controller
Serial Peripherals	SATA, USB, UART, SPI, etc

P5040 Target Markets, Key Features

Enterprise /
Service Provider
Equipment

Fabric
Controller

Storage
Networks

Aerospace
& Defense

The P5040 and P5021 embedded processors were architected to provide maximum benefit for the target markets

Balanced Architecture

- High-performance cores – power efficiency
- Up to 64-bit addressable memory space
- Up to 2.4GHz with < 35W TDP

CoreNet On-chip Fabric

- Designed to “feed” the cores
- Eliminates bus contention
- Optimizes efficiency of each core

High Speed Interconnect

- PCIe, SGMII, XAUI, SATA, Aurora

Tightly Coupled Cache Hierarchy

- Optimum memory architecture
- Cores are closer to the data to reduce latency

Application-Specific Accelerators

- Provides optimum performance/power
- Security, Packet-processing offload, RAID5/6

P5 Customer Platforms – Speed Time to Market

Summary

QorIQ P5040/5021

Top-tier single threaded performance for power-conscious control plane applications

Scalable Processor Family – Building on the single and dual-core processors in the QorIQ P5 family, the P5040 delivers a pin compatible quad-core option for control plane applications

Balanced Architecture – With 4 high-performance cores and low latency memory hierarchy, the P5040's architecture provides an ideal solution for compute-intensive applications with tight thermal constraints

Intelligent Integration – of cores, accelerators and advanced I/O for optimal system performance with reduced development and thermal management costs

Availability – Devices and a full-featured development system with Freescale Linux® SDK will be offered in June 2012. Software and tools support from Enea, Green Hills Software, Mentor Graphics and QNX in 2H '12.
