

TOSHIBA Bi-CMOS INTEGRATED CIRCUIT SILICON MONOLITHIC

# TB6504F

## PWM CHOPPER TYPE BIPOLAR STEPPING MOTOR DRIVER

The TB6504F is PWM chopper type sinusoidal micro step bipolar stepping motor driver.

Sinusoidal micro step operation is accomplished only a clock signal inputting by means of built-in hard ware.

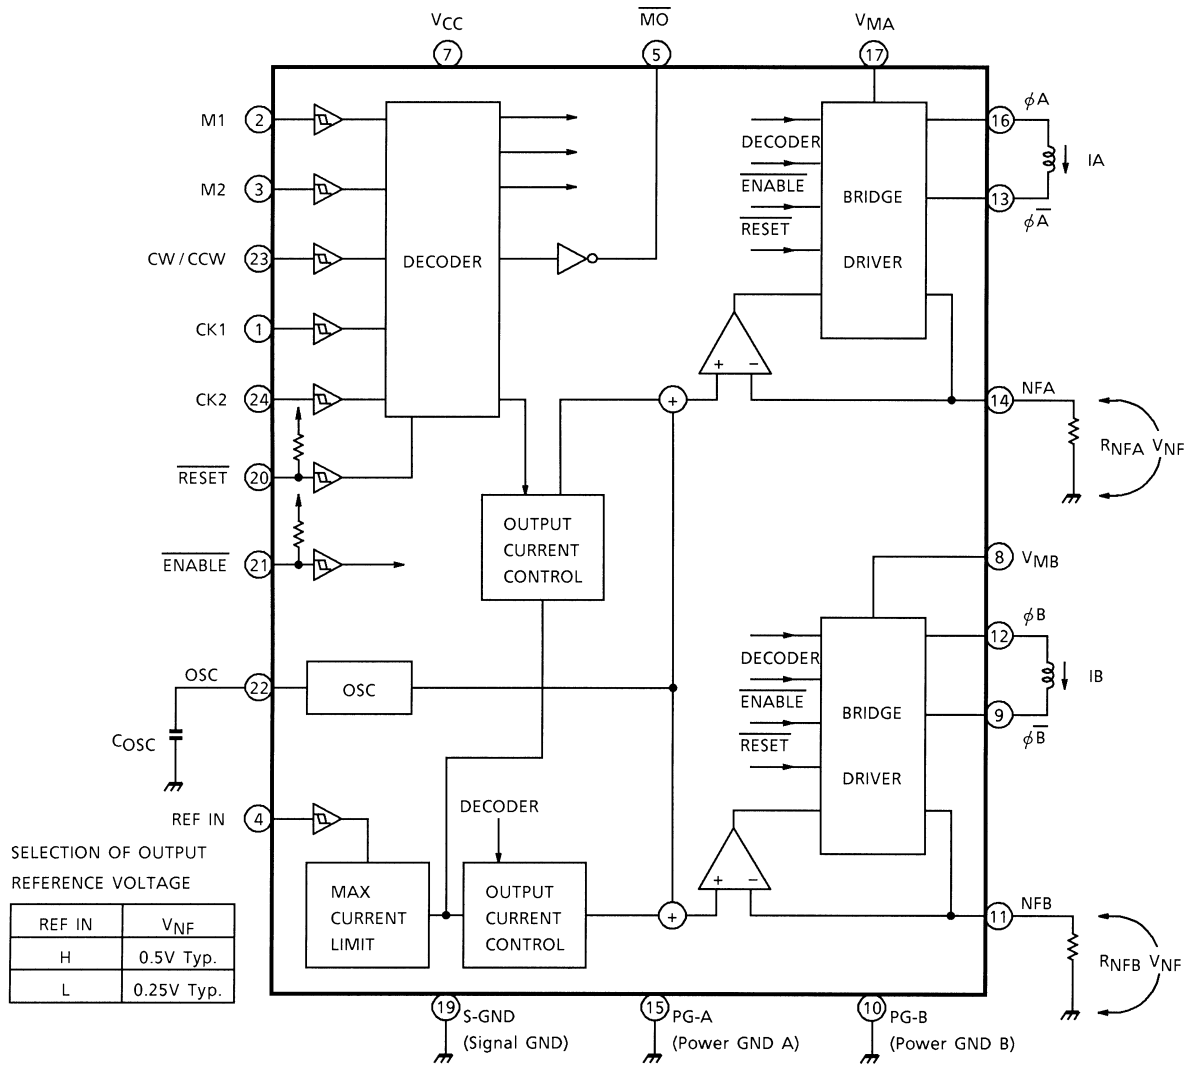

### FEATURES

- 1 chip bipolar sinusoidal micro step stepping motor driver.
- Output Current up to 150 mA
- PWM chopper type.
- Structured by high voltage Bi-CMOS process technology.
- Forward and reverse rotation are available.
- 2, 1-2, W1-2, 2W1-2 phase 1 or 2 clock drives are selectable.
- Package : SSOP24-P-300-1.00
- Input Pull-Up Resistor equipped with RESET and ENABLE Terminal : R = 200 k $\Omega$  (Typ.)
- Output Monitor available with  $\overline{MO}$ . I<sub>O( $\overline{MO}$ )</sub> =  $\pm 2$  mA MAX.
- Reset and Enable are available with  $\overline{RESET}$  and  $\overline{ENABLE}$ .

Weight : 0.32 g (Typ.)

## BLOCK DIAGRAM

## OUTPUT CIRCUIT

## INPUT CIRCUIT

CK1, CK2, CW / CCW, M1, M2, REF IN : Terminals

$\overline{RESET}$ ,  $\overline{ENABLE}$  : Terminal

OSC : Terminal

**OSC FREQUENCY CALCULATION**

Sawtooth OSC circuit consists of Q<sub>1</sub> through Q<sub>4</sub> and R<sub>1</sub> through R<sub>4</sub>.

Q<sub>2</sub> is turned “off” when V<sub>OSC</sub> is less than the voltage of 2.5 V + V<sub>BE</sub> Q<sub>2</sub> approximately equal to 2.85 V.

V<sub>OSC</sub> is increased by C<sub>OSC</sub> charging through R<sub>1</sub>.

Q<sub>3</sub> and Q<sub>4</sub> are turned “on” when V<sub>OSC</sub> becomes 2.85 V (Higher level.)

Lower level of V (22) pin is equal to V<sub>BE</sub> Q<sub>2</sub> + V<sub>SAT</sub> Q<sub>4</sub> approximately equal to 1.4 V.

V<sub>OSC</sub> is calculated by following equation.

$$V_{OSC} = 5 \cdot [1 - \exp(-\frac{t}{C_{OSC} \cdot R1})] \dots\dots\dots (1)$$

Assuming that V<sub>OSC</sub> = 1.4 V (t = t<sub>1</sub>) and = 2.85 V (t = t<sub>2</sub>)

C<sub>OSC</sub> is external capacitance connected to pin (22) and R<sub>1</sub> is on-chip 10 kΩ resistor.

Therefore, OSC frequency is calculated as follows.

$$t_1 = -C_{OSC} \cdot R1 \cdot \ln (1 - \frac{1.4}{5}) \dots\dots\dots (2)$$

$$t_2 = -C_{OSC} \cdot R1 \cdot \ln (1 - \frac{2.85}{5}) \dots\dots\dots (3)$$

$$f_{OSC} = \frac{1}{t_2 - t_1} = \frac{1}{C_{OSC} (R1 \cdot \ln (1 - \frac{1.4}{5}) - R1 \cdot \ln (1 - \frac{2.85}{5}))}$$

$$= \frac{1}{5.15 - C_{OSC}} \text{ (kHz) } (C_{OSC} : \mu F)$$

**ENABLE AND RESET FUNCTION AND  $\overline{MO}$  SIGNAL**

**Fig.1 1-2 Phase drive mode (M1 : H, M2 : L)**

$\overline{ENABLE}$  Signal disables only Output Signal.

Internal logic functions are proceeded by CK signal without regard to  $\overline{ENABLE}$  signal.

Therefore, Output Current is initiated from the proceeded timing point of internal logic circuit after release of disable mode.

Fig.1 shows the  $\overline{ENABLE}$  functions, when the system is selected in 1-2 Phase drive mode.

As  $\overline{RESET}$  is low, the decoder is initialized and  $\overline{MO}$  is low.

After  $\overline{RESET}$  is high, the motion is resumed from next clock as shown in Fig.2.

**Fig.2 1-2 Phase drive mode (M1 : H, M2 : L)**

$\overline{MO}$  (Monitor Output) Signals is used as rotation and initial signal for stable rotation checking.

**TEST CIRCUIT 3. :  $V_{NF}$  (H), (L)**

## TEST CIRCUIT 4. : $V_{CE(SAT)}$ Upper, Lower

Note: Calibrate Output Current becomes 0.06 A (or 0.12 A) with this resistor.

## TEST CIRCUIT 5. : $V_{F-U}$ , $V_{F-L}$

## TEST CIRCUIT 6. : $I_{OH}$ , $I_{OL}$

Note: Not to take a GND with any non-connecting Pins.

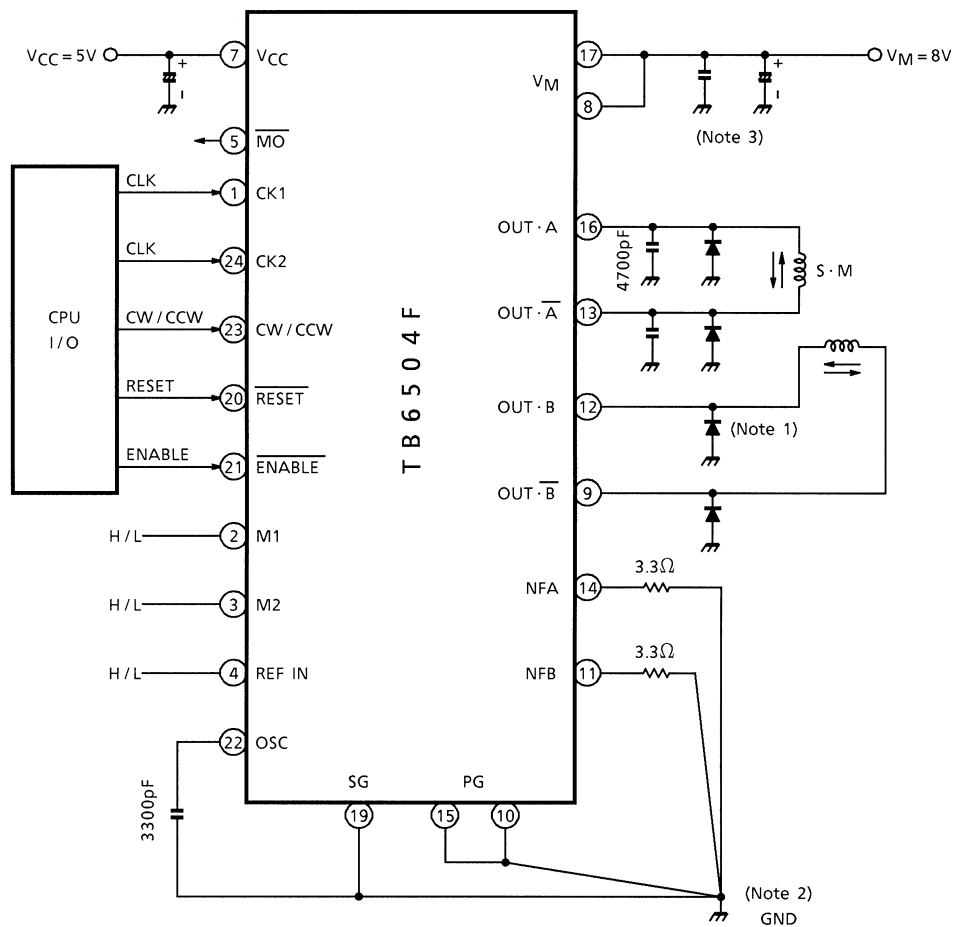

**AC ELECTRICAL CHARACTERISTIC, TEST CIRCUIT**

CK (OSC)-OUT

APPLICATION CIRCUIT

- Note 1: Schottky diode (U1GWJ49) to be connected additionally between each output (pin 16 / 13 / 12 / 9) and GND for preventing Punch-through Current.
- Note 2: GND pattern to be laid out at one point in order to prevent common impedance.
- Note 3: Capacitor for noise suppression to be connected between the Power Supply ( $V_{CC}$ ,  $V_M$ ) and GND to stabilize the operation.
- Note 4: Utmost care is necessary in the design of the output line,  $V_M$  and GND line since IC may be destroyed due to short-circuit between outputs, air contamination fault, or fault by improper grounding.

## PACKAGE DIMENSIONS

SSOP24-P-300-1.00

Unit : mm

Weight : 0.32 g (Typ.)

**RESTRICTIONS ON PRODUCT USE**

000707EBA

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.  
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
