## description

The TPPM0111 is a power source intended for use in systems that have a single 5-V input source and require dual, linearly-regulated, low-dropout voltage sources. The outputs must track within 2 V of each other during all conditions and modes of operation. Each output is protected against overcurrent conditions. In the event that one of the outputs is shorted to ground, the other output must maintain a voltage output differential of less than 2 V compared to the output with the abnormal condition.

The 3.3-V  $\pm$ 3% regulated output is capable of driving loads of 1.5 A, and the 1.5-V  $\pm$ 2% regulated output is capable of driving loads of 300 mA under all normal operating conditions. The device is available in a PowerPAD™ thermally-enhanced package for efficient heat management, and requires a copper plane to dissipate the heat.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PowerPAD is a trademark of Texas Instruments.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

## functional block diagram

### Terminal Functions

TERMINAL NAME		NO.	I/O	DESCRIPTION
NC	1–3, 5, 7, 9–12 13–17† 18,9		I	No connection
3.3VOUT	4		O	3.3-V regulated output
5VCC	6		I	5-V input
1.5VOUT	8		O	1.5-V regulated output
GND	20		I	Ground

† These terminals are to be used for test purposes only, and are not connected in system applications. No signal traces should be connected to these terminals.

**Table 1. Input Selection‡**

INPUT CONDITION	3.3VOUT CONDITION		1.5VOUT CONDITION	
	V(3.3VOUT)	I(3.3VOUT)	V(1.5VOUT)	I(1.5VOUT)
Power up 0 V to 5 V	Within 2 V of 1.5VOUT	0 to overcurrent limit	0 V to 1.5 V	0 to overcurrent limit
5 V	3.3 V ±3%	0 A to 1.5 A	1.5 V ±2%	0 mA to 300 mA
Power down 5 V to 0 V	Within 2 V of 1.5VOUT	1.5 A to 0 A	1.5 V to 0 V	300 mA to 0 mA
5 V	0 V	Up to 5.4 A	1.5 V	0 mA to 300 mA
5 V	Less than 2 V	Don't care	0 V	Up to 1.08 A
0 V	Within 2 V of 1.5VOUT	Don't care	1.5 V to 0 V	Don't care

‡ See Figures 2, 3, and 4.

### absolute maximum ratings over operating free-air temperature (unless otherwise noted)§

5-V input, V <sub>(5VCC)</sub> (see Notes 1 and 2)	7 V
3.3-V output current limit, I <sub>L(3.3VOUT)</sub>	5.4 A
1.5-V output current limit, I <sub>L(1.5VOUT)</sub>	1.08 A
Continuous power dissipation, P <sub>D</sub> (see Note 3)	4 W
Electrostatic discharge susceptibility, V <sub>(HBMESD)</sub>	2 kV
Operating ambient temperature range, T <sub>A</sub>	0°C to 70°C
Storage temperature range, T <sub>stg</sub>	–55°C to 150°C
Lead temperature (soldering, 10 sec), T <sub>(LEAD)</sub>	260°C

§ Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES:
- All voltage values are with respect to GND.
  - Absolute negative voltage values on these terminals should not be below –0.5 V.
  - Assumed correct thermal management technique implementation and ambient temperature of 25°C.

### recommended operating conditions

		MIN	TYP	MAX	UNIT
5-V input, V <sub>(5VCC)</sub>		4.7		5.3	V
Load capacitance, C <sub>L</sub>	10 mΩ < ESR <sub>(CL)</sub> < 1 Ω			100	μF
Output load current, I <sub>O</sub>	3.3VOUT	0		1.5	A
	1.5VOUT	0		300	mA
Ambient temperature, T <sub>A</sub>		0		55	°C

# TPPM0111

## DUAL LOW-DROPOUT LINEAR REGULATOR

SLVS414 – DECEMBER 2001

### electrical characteristics, $T_A = 0^\circ\text{C}$ to $55^\circ\text{C}$ , $C_L = 100\ \mu\text{F}$ , $V_{(5VCC)} = 5\ \text{V}$ (unless otherwise noted)

The operating ratings specified below is interpreted as conditions that do not degrade the device's parametric or functional specifications for the life of the product.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{(5VCC)}$	Input voltage		4.7	5	5.3	V
$I_{(Q)}$	Quiescent supply current	$I_{O(3.3VOUT)} = 1.2\ \text{A}$ and $I_{O(1.5VOUT)} = 300\ \text{mA}$		1		mA
		With no loads on outputs		600		$\mu\text{A}$
$I_O$	Output load current	$3.3VOUT = 3.3\ \text{V} \pm 3\%$		1.5		A
		$1.5VOUT = 1.5\ \text{V} \pm 2\%$		300		mA
$V_{(3.3VOUT)}$	3.3-V output	$I_O = 1\ \text{mA}$ to $1.2\ \text{A}$	3.23	3.33	3.43	V
$V_{(1.5VOUT)}$	1.5-V output	$I_O = 1\ \text{mA}$ to $250\ \text{mA}$	1.47	1.5	1.53	V
$V_{(DO)}$	Regulator drop-out voltage	3.3VOUT			1	V
		1.5VOUT			2.8	
$I_{(3.3VOUT)OC}$	Overcurrent protection	$3.3VOUT, I_L \uparrow$ , See Note 4	2.25	3	5.4	A
		Hysteresis		500		mA
$I_{(1.5VOUT)OC}$	Overcurrent protection	$1.5VOUT$ , See Note 4	0.45	0.6	1.08	A
		Hysteresis		200		mA
$C_L$	Load capacitance for both regulated outputs				100	$\mu\text{F}$
$ESR_{(CL)}$	Equivalent series resistance				1	$\Omega$
$V_{th}$	Threshold voltage	$5\ \text{V} \downarrow, I_{O(3.3VOUT)} = 1.2\ \text{A}$ , $I_{O(1.5VOUT)} = 250\ \text{mA}$	3.4		4.2	V
		Hysteresis		250		mV
$T_{TSD}^\dagger$	Thermal shutdown hysteresis	Temperature $\uparrow$	150		180	$^\circ\text{C}$
		Hysteresis		15		

$^\dagger$  Design targets only. Not tested in production.

NOTE 4: In the event of an overcurrent condition, the output should be a constant current limit such that the current never exceeds 360% of  $I_{O(TYP)}$ . Once the overcurrent condition is removed, the device returns to within the specified regulation limits.

### electrical characteristics, $T_A = 0^\circ\text{C}$ to $55^\circ\text{C}$ , $C_L = 100\ \mu\text{F}$ , $V_{(5VCC)} = 5\ \text{V}$ (unless otherwise noted) $^\dagger$

The following parametric requirements are applicable to both 3.3VOUT and 1.5VOUT when subjected to these transient tests.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{(OTL)}$	Output transient voltage limit	Voltage that load step can affect nominal output voltage (see Note 5)	-3%		3%	
$I_{O(STEP)}$	Output load step current	See Note 5	0	$I_{O(TYP)}$		A
$I_{O(SLEW)}$	Output load step current slew rate	See Note 5 and 6			8	A/ $\mu\text{s}$
$t_{(STEP)}$	Output transient time limit	See Note 5		10		$\mu\text{s}$
	Power up overshoot	Maximum voltage overshoot allowed on either output when component begins regulation. Voltage transient time limit is $t_{(STEP)}$ (see Note 5)			7	%

$^\dagger$  Design targets only. Not tested in production..

NOTES: 5. Both outputs must maintain voltage regulation within  $\pm 3\%$  of nominal, for a load step from 0 to  $I_{O(TYP)}$  and from  $I_{O(TYP)}$  to 0 A with a current slew rate of 8A/ms. Load may be toggled at a rate of 20 kHz typical. The outputs must return to the specified regulation limits within the specified time of 10  $\mu\text{s}$  (typical).

6. Both linear regulators must be capable of regulating small ESR ceramic capacitors or aluminum electrolytic capacitors (see ESR specification).

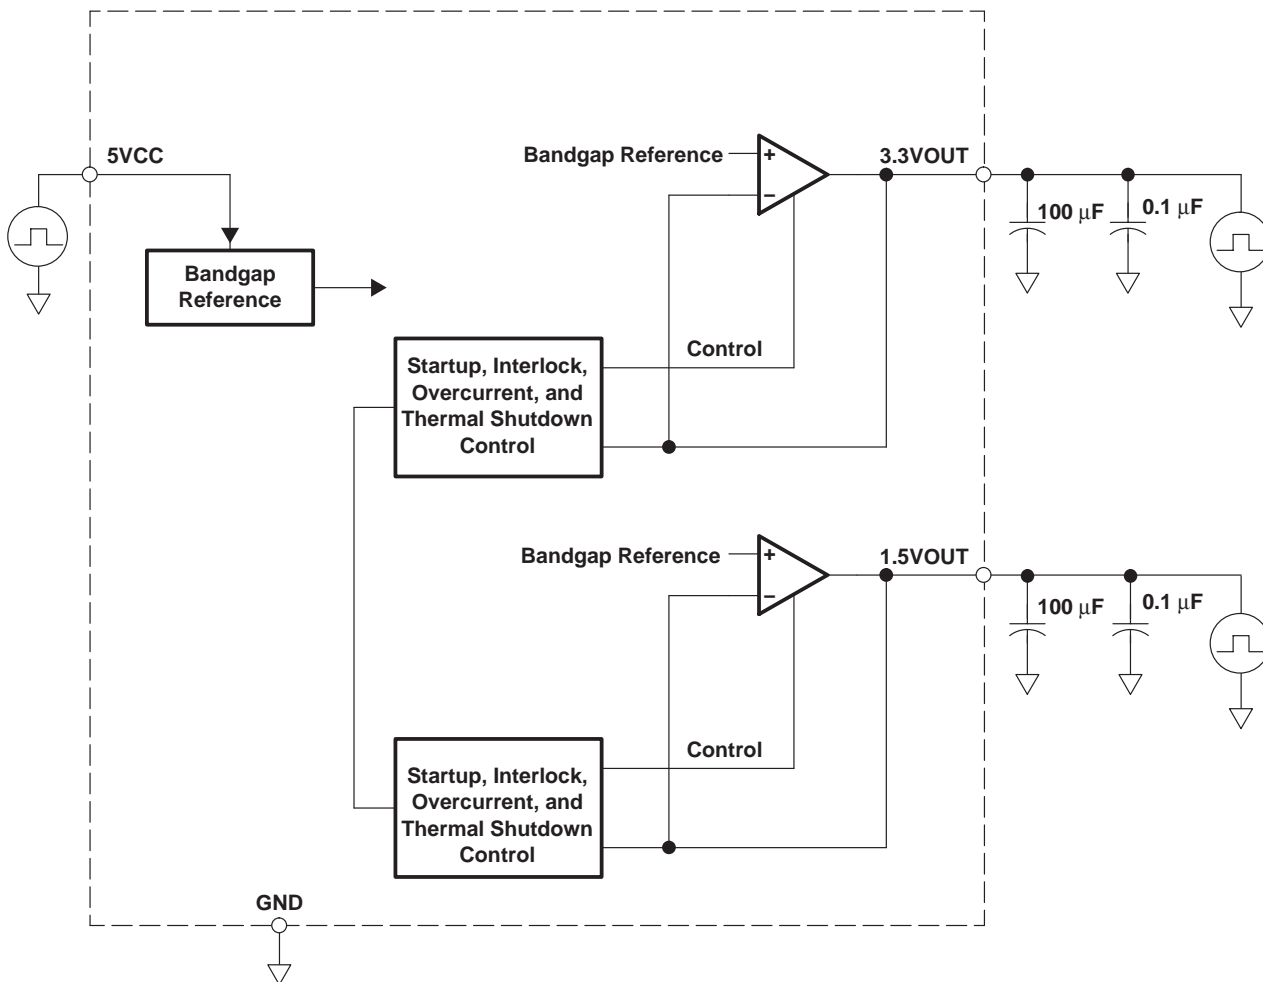

thermal characteristics

PARAMETER		MIN	TYP	MAX	UNIT
$R_{\theta JC}$	Thermal impedance, junction-to-case			8	$^{\circ}C/W$
$R_{\theta JA}$	Thermal impedance, junction-to-ambient	See Note 7		33	$^{\circ}C/W$

NOTE 7: See JEDEC PCB specifications for high-K and correct implementation for 150 LFM air flow.

TYPICAL CHARACTERISTICS

NOTE: The 100- $\mu F$  capacitor has: ESL = 3 nH and ESR = 0.5  $\Omega$  to 1  $\Omega$ .  
 Testing circuit includes 100- $\mu F$  aluminum capacitors which may be replaced with 10- $\mu F$  ceramic capacitors. Both capacitors must have equivalent series inductance ESL < 3 nH and equivalent series resistance ESR < 1  $\Omega$ .

## TYPICAL THERMAL CHARACTERISTICS

To ensure reliable operation of the device, the junction temperature of the output device must be within the safe operating area (SOA). This is achieved by providing a means to dissipate the heat generated from the junction of the output structure. There are two components that contribute to thermal resistance. They consist of two paths in series. The first is the junction-to-case thermal resistance,  $R_{\theta JC}$ ; the second is the case-to-ambient thermal resistance,  $R_{\theta CA}$ . The overall junction-to-ambient thermal resistance,  $R_{\theta JA}$ , is determined by:

$$R_{\theta JA} = R_{\theta JC} + R_{\theta CA}$$

The ability to efficiently dissipate the heat from the junction is a function of the package style and board layout incorporated in the application. The operating junction temperature is determined by the operating ambient temperature,  $T_A$ , and the junction power dissipation,  $P_J$ .

The junction temperature,  $T_J$ , is determined by the following thermal equation:

$$T_J = T_A + P_J (R_{\theta JC}) + P_J (R_{\theta CA})$$

$$T_J = T_A + P_J (R_{\theta JA})$$

This particular application uses the 20-pin DWP power pad package with a standard lead frame with a dedicated ground terminal. Using a multilayer printed-circuit board (PCB), the power pad is mounted as recommended in the TI packaging application. The power pad is electrically connected to the ground plane of the board through a dedicated ground pin and the die mount power pad. This provides a means for heat spreading through the copper plane associated within the PCB (ground layer). The thermal resistance from junction to ambient,  $R_{\theta JA}$ , is dependent of several factors, the implemented method of package attachment to the heat spreading material and the air flow in the system application.

# TPPM0111 DUAL LOW-DROPOUT LINEAR REGULATOR

SLVS414 – DECEMBER 2001

## APPLICATION INFORMATION

### packaging

To maximize the efficiency of this package for application on a single layer or multilayer PCB, certain guidelines must be followed.

The following information is to be used as a guideline only. For further information, refer to the PowerPAD concept implementation document.

### multilayer PCB

The following are guidelines for mounting the PowerPAD IC on a multilayer PCB with a ground plane.

Figure 7. Package and Land Configuration for a Multilayer PCB

Figure 8. Multilayer Board (Side View)

APPLICATION INFORMATION

In a multilayer board application, the thermal vias are the primary method of heat transfer from the package thermal pad to the internal ground plane. The efficiency of this method depends on several factors (die area, number of thermal vias, thickness of copper, etc.). Consult the PowerPAD Thermally Enhanced Package Technical Brief.

single layer PCB

Figure 9. Land Configuration for Single-Layer PCB

Layout recommendation is to utilize as much copper area for the power management section of a single-layer board as possible. In a single-layer board application, the thermal pad is attached to a heat spreader (copper areas) by using a low thermal impedance attachment method (solder paste or thermal-conductive epoxy). In both of these cases, it is advisable to use as much copper traces as possible to dissipate the heat.

IMPORTANT

If this attachment method is not implemented correctly, this product will not operate efficiently. Power dissipation capability will be adversely affected if the device is incorrectly mounted onto the circuit board.

† It is recommended that the capacitors on the outputs (100 µF) have a low ESR < 1 Ω. These stabilizing capacitors must be placed in close proximity of their corresponding output terminals for optimal performance.

Figure 10. Application Schematic

**PACKAGING INFORMATION**

Orderable Device	Status <sup>(1)</sup>	Package Type	Package Drawing	Pins	Package Qty	Eco Plan <sup>(2)</sup>	Lead/Ball Finish	MSL Peak Temp <sup>(3)</sup>

TPPM0111DWPRG4	ACTIVE	SO Power PAD	DWP	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DWP (R-PDSO-G20)

PowerPAD™ PLASTIC SMALL OUTLINE

## THERMAL INFORMATION

This PowerPAD™ package incorporates an exposed thermal pad that is designed to be attached to a printed circuit board (PCB). The thermal pad must be soldered directly to the PCB. After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For additional information on the PowerPAD package and how to take advantage of its heat dissipating abilities, refer to Technical Brief, PowerPAD Thermally Enhanced Package, Texas Instruments Literature No. SLMA002 and Application Brief, PowerPAD Made Easy, Texas Instruments Literature No. SLMA004. Both documents are available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

PowerPAD™ PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. This package is designed to be soldered to a thermal pad on the board. Refer to Technical Brief, PowerPad Thermally Enhanced Package, Texas Instruments Literature No. SLMA002, SLMA004, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>. Publication IPC-7351 is recommended for alternate designs.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste.

PowerPAD is a trademark of Texas Instruments.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46C and to discontinue any product or service per JESD48B. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
