

## DECT SiGe Front End IC

### Description

The U7004B is a monolithic SiGe transmit/receive front end IC with power amplifier, internally  $50\text{-}\Omega$  matched, low-noise amplifier and T/R switch driver. It is especially designed for operation in TDMA systems like DECT. Due to the ramp-control feature and a very low quiescent current an external switch transistor for  $V_S$  is not required.

Electrostatic sensitive device.

Observe precautions for handling.

### Features

- Single 3-V supply voltage
- High-power-added efficient power amplifier ( $P_{out}$  typ. 26.5 dBm)
- Ramp-controlled output power
- Low-noise preamplifier (NF typ. 1.8 dB)
- Biasing for external PIN diode T/R switch
- Current-saving standby mode
- Few external components

### Block Diagram

### Ordering Information

| Extended Type Number | Package | Remarks          |
|----------------------|---------|------------------|
| U7004B-MFS           | SSO20   | Tube             |
| U7004B-MFSG3         | SSO20   | Taped and reeled |

## Pin Description

| Pin | Symbol     | Function   |
|-----|------------|--|
| 1   | R_SWITCH   | Resistor to GND sets the PIN diode current                               |
| 2   | SWITCH_OUT | Switched current output for PIN diode                                    |
| 3   | GND1       | Ground   |
| 4   | LNA_IN     | Low-noise amplifier input  |
| 5   | GND2       | Ground   |
| 6   | V1_PA      | Inductor to power supply for power amplifier                             |
| 7   | GND3       | Ground   |
| 8   | GND4       | Ground   |
| 9   | GND5       | Ground   |
| 10  | V2_PA_OUT  | Inductor to power supply and matching network for power amplifier output |
| 11  | GND6       | Ground   |
| 12  | GND7       | Ground   |
| 13  | VS_PA      | Supply voltage for power amplifier                                       |
| 14  | RAMP       | Power-ramping control input  |
| 15  | PA_IN      | Power amplifier input  |
| 16  | VS_LNA     | Supply-voltage input for low-noise amplifier                             |
| 17  | GND8       | Ground   |
| 18  | LNA_OUT    | Low-noise amplifier output   |
| 19  | RX_ON      | RX active high   |
| 20  | PU         | Power-up active high   |

## Absolute Maximum Ratings

All voltages refer to GND (Pins 3, 5, 7, 8, 9, 11, 12 and 17)

| Parameter                                 | Symbol             | Value       | Unit |
|---|--------------------|-------------|------|
| Supply voltage                            | V <sub>S</sub>     | 5           | V    |
| Duty cycle PA                             |                    | 50          | %    |
| Burst duration PA                         |                    | 5           | ms   |
| Junction temperature                      | T <sub>j</sub>     | 150         | °C   |
| Storage temperature                       | T <sub>stg</sub>   | -40 to +125 | °C   |
| Input power PA Pin 15                     | P <sub>inPA</sub>  | +10         | dBm  |
| Input power LNA Pin 4                     | P <sub>inLNA</sub> | -5          | dBm  |
| ESD protection according to ESD-S5.2-1994 |                    | Class M1    |      |

## Thermal Resistance

| Parameter        | Symbol            | Value | Unit |
|------------------|-------------------|-------|------|
| Junction ambient | R <sub>thJA</sub> | 95    | K/W  |

## Operating Range

All voltages refer to GND (Pins 3, 5, 7, 8, 9, 11, 12 and 17). The following table represents the sum of all supply currents depending on the TX/RX mode. Power supply points are VS\_LNA, VS\_PA, V1\_PA, V2\_PA\_OUT.

| Parameter           |                   | Symbol           | Min. | Typ. | Max. | Unit |
|---------------------|-------------------|------------------|------|------|------|------|
| Supply voltage      | Pins 6, 10 and 13 | V <sub>S</sub>   | 2.7  | 3.6  | 4.6  | V    |
| Supply voltage      | Pin 16            | V <sub>S</sub>   | 2.7  | 3.6  | 4.6  | V    |
| Supply current      | TX                | I <sub>S</sub>   |      | 450  |      | mA   |
|                     | RX                | I <sub>S</sub>   |      | 8    |      | mA   |
| Standby current     | PU = 0            | I <sub>S</sub>   |      | 10   |      | µA   |
| Ambient temperature |                   | T <sub>amb</sub> | -25  | +25  | +70  | °C   |

## Electrical Characteristics

Test conditions (unless otherwise specified): V<sub>S</sub> = 3.6 V, T<sub>amb</sub> = 25°C, pulsed mode, duty cycle 4.17%, t<sub>on</sub> = 417 µs

| Parameter                            | Test Conditions / Pins  | Symbol                 | Min. | Typ.   | Max. | Unit |
|--------------------------------------|---|------------------------|------|--------|------|------|
| <b>Power amplifier<sup>1)</sup></b>  |   |                        |      |        |      |      |
| Supply voltage                       | Pins 6, 10 and 13   | V <sub>S</sub>         | 2.7  | 3.6    | 4.6  | V    |

## Ozone Depleting Substances Policy Statement

It is the policy of **TEMIC Semiconductor GmbH** to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

**TEMIC Semiconductor GmbH** has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

**TEMIC Semiconductor GmbH** can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

### We reserve the right to make changes to improve technical design and may do so without further notice.

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use TEMIC Semiconductors products for any unintended or unauthorized application, the buyer shall indemnify TEMIC Semiconductors against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
